AIAI, Informatics, University of Edinburgh

Which agencies help now?

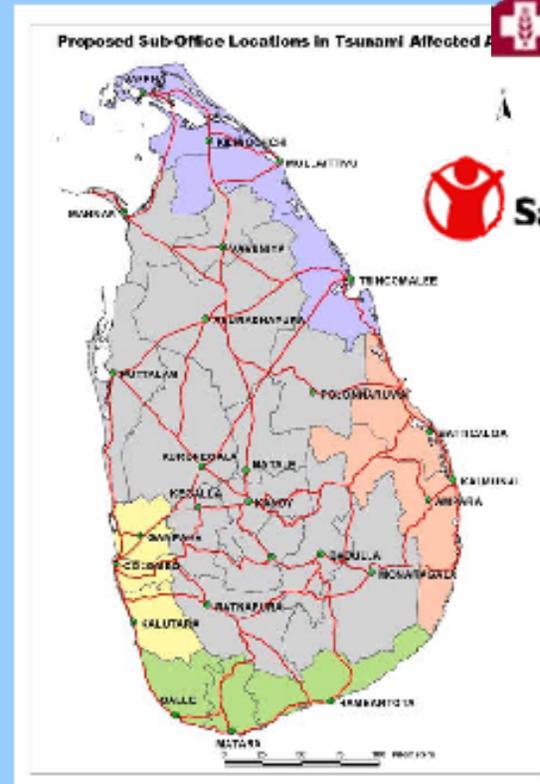

Coordination of Humanitarian Response

- **Developing common strategies**
 - **Assessing situations and needs**
 - **Convening coordination forums**
 - **Mobilizing resources**
 - **Addressing common problems**
 - **Administering coordination mechanisms**
- 

WHO activities in Sri Lanka

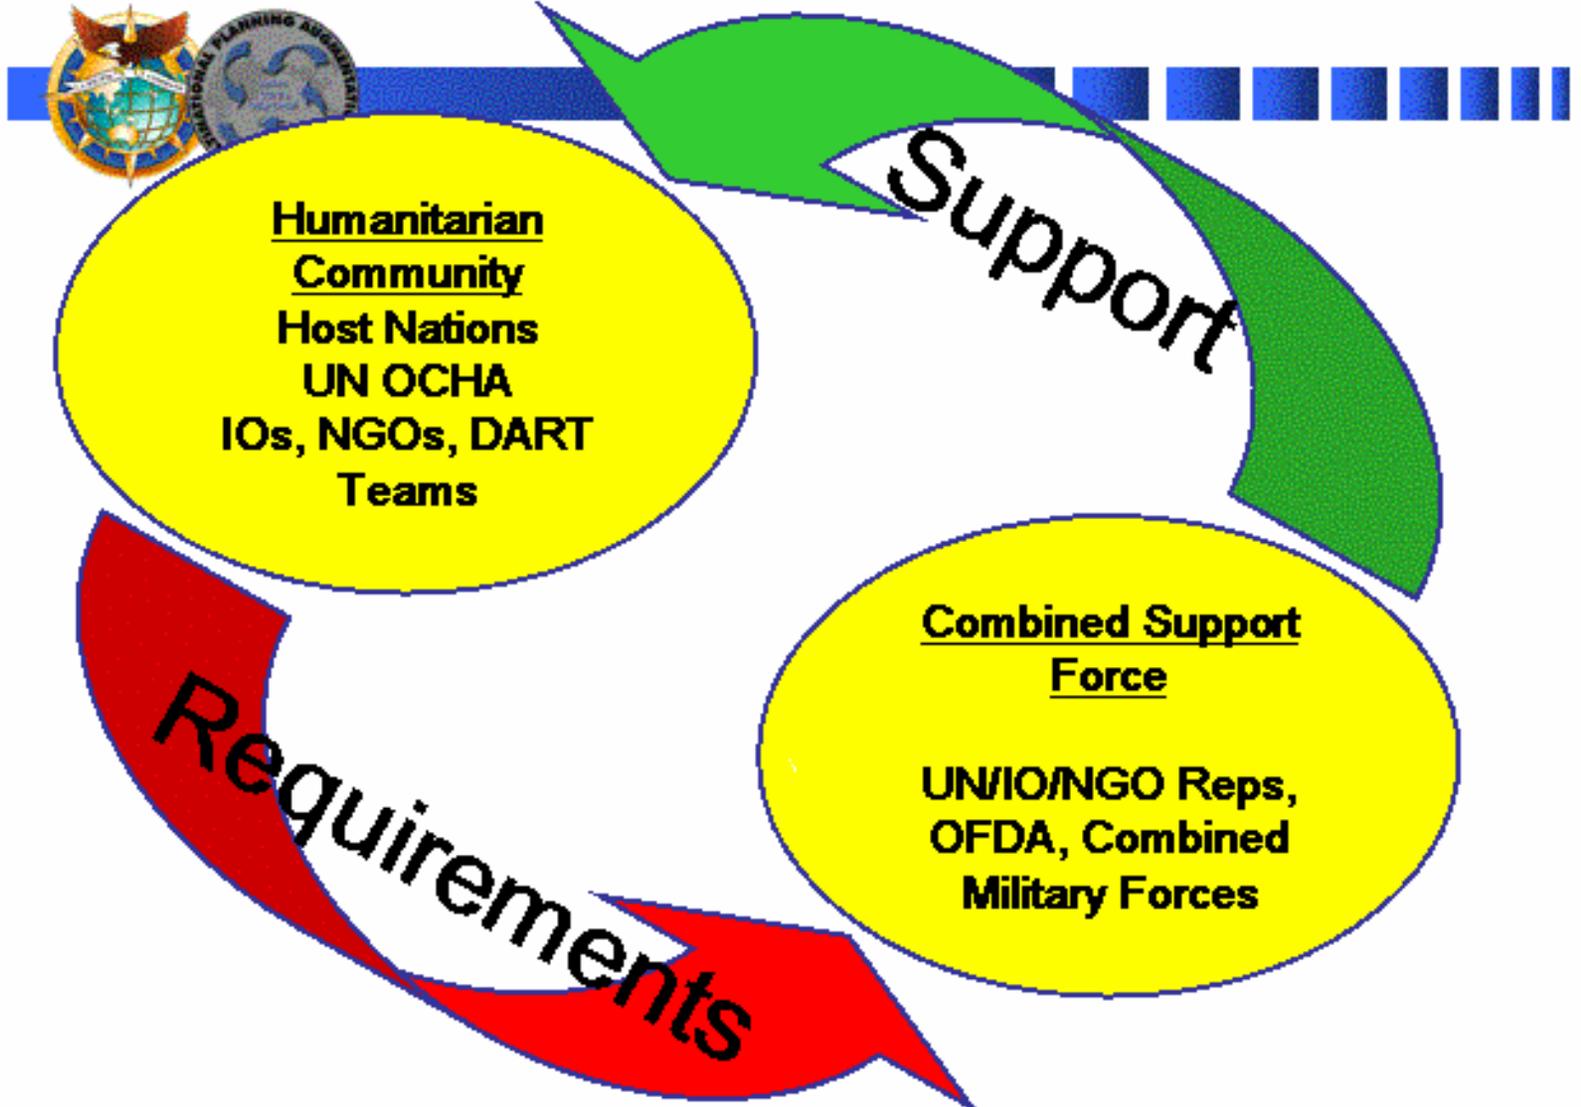

- 8 WHO staff – 3 small WHO teams in country for 12 districts
- Proposed 26 sub-offices for affected regions
- Supporting disease surveillance: information flow not good enough
- Mapping the damages to the health network
- WHO Health kits
 - NEHK 65 kits needed, 18 in pipeline, 47 arrived
 - Diarrhoeal kits 40 needed 39 in pipeline 1 arrived
 - Surgical kits 10 needed 10 in pipeline
- 3 logisticians arrived (2 Colombo, 1 Ampara) planned to send total 13
- WHO 2 million chlorine tabs
- Strengthening the WHO Country office:
 - WATSAN expert from Nepal
 - Public health experts from WHO/SEARO, Nepal, WHO/EURO and Australia

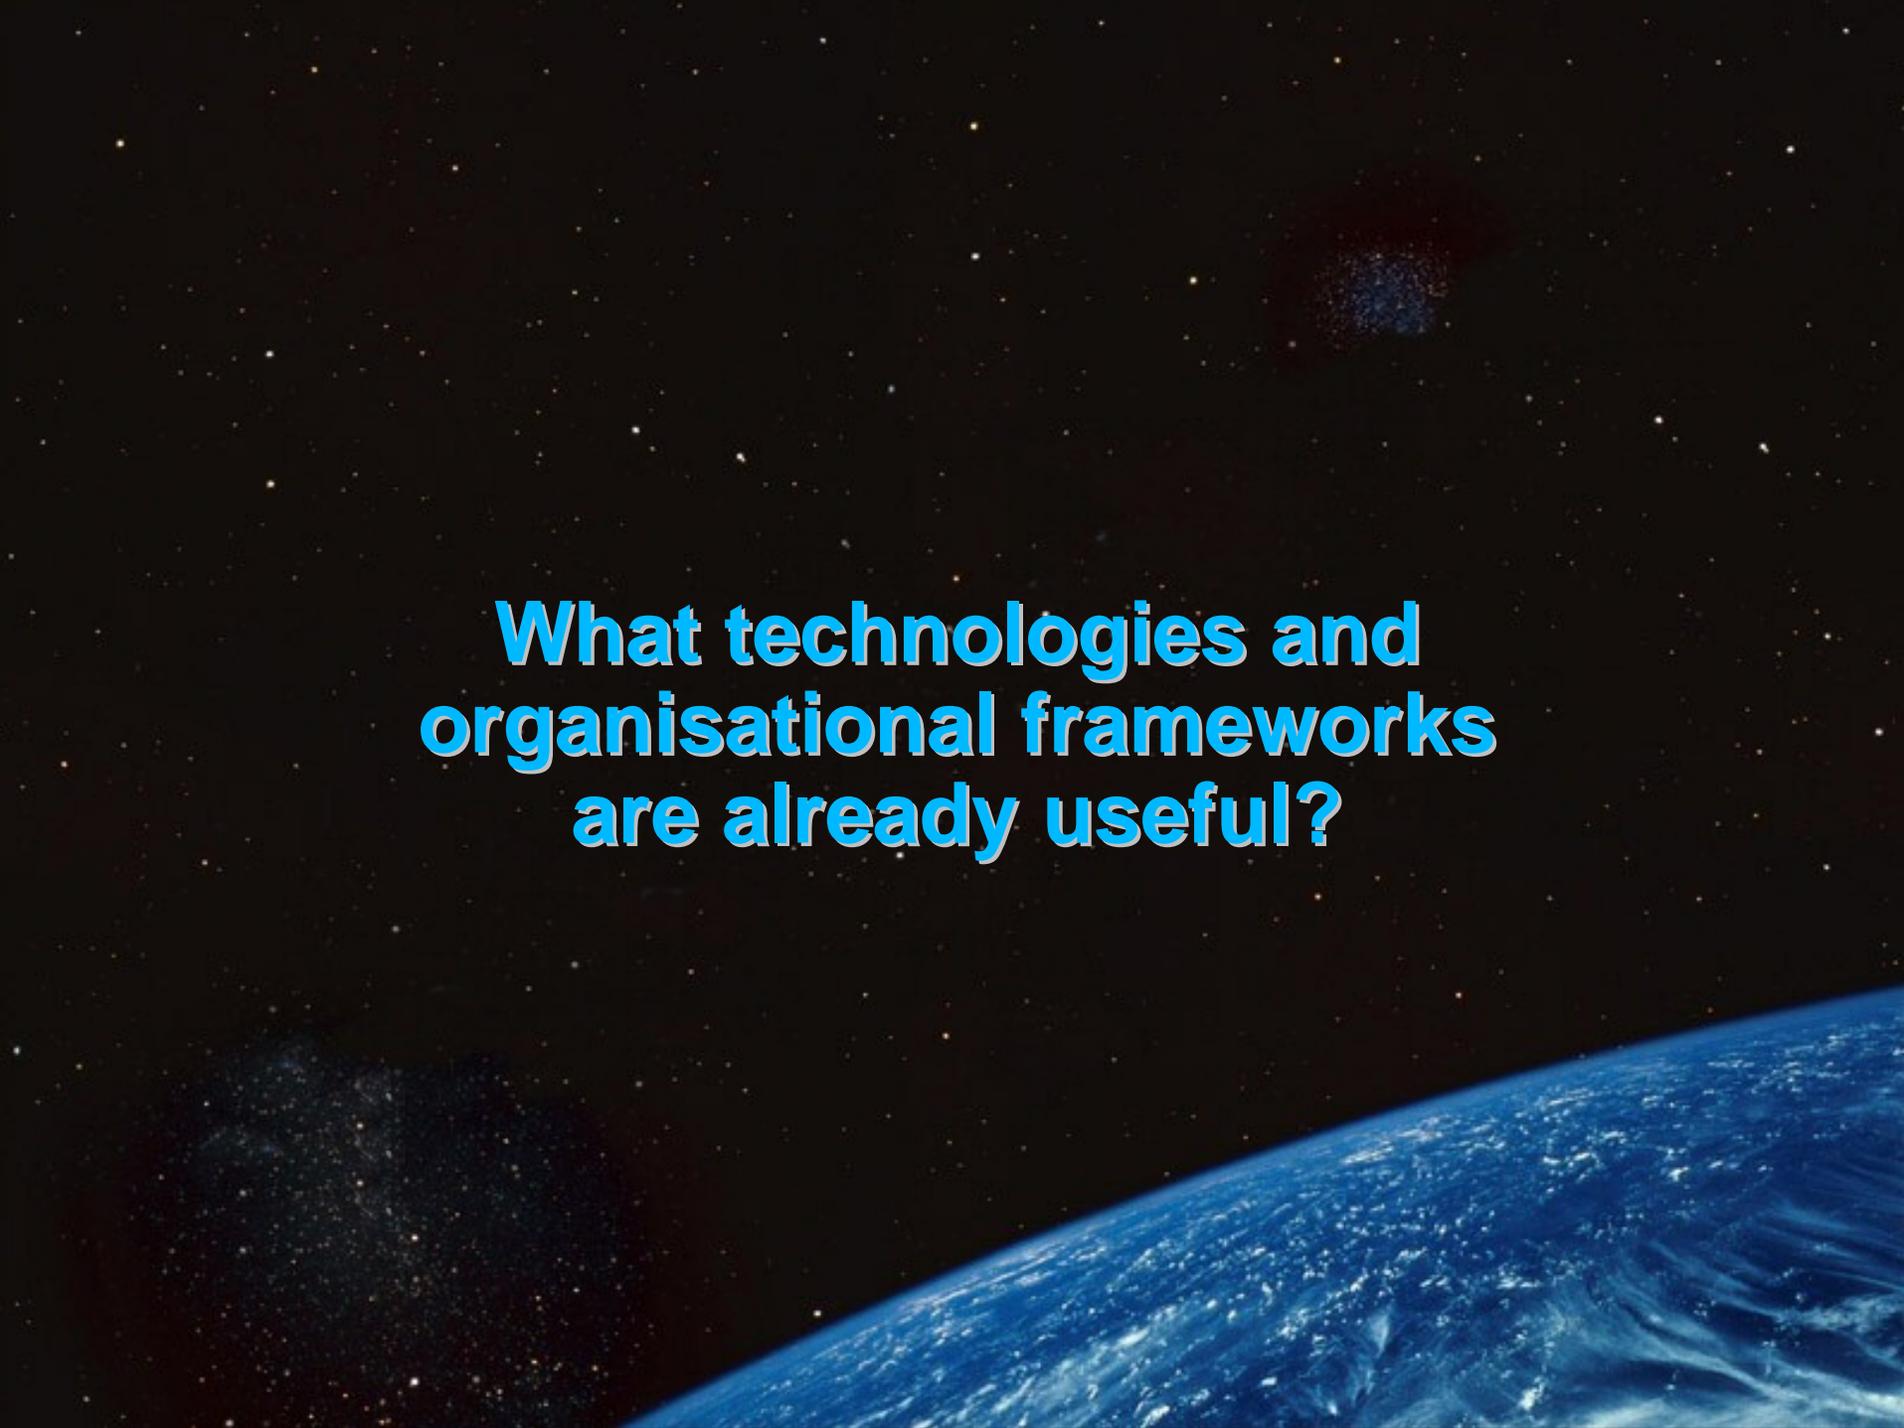

Military Assistance

E.g. Unified Assistance CSF-536

SRI LANKA

“My partner and I were staying in Beruwela on the south-west coast of Sri Lanka when the tsunami hit. We watched from the first floor of our hotel as a wall of water swept in and tore the ground floor apart underneath us.

Waiting to be evacuated to Colombo was very frightening as everyone was fearful of another and possibly bigger wave

Web posting reunites quake family

Rob Delissen had no idea whether his brother Theo, his wife and their two-year-old daughter were still alive after the tsunami hit Thailand.

Posters of missing and injured people cover Thai hospital walls

The Dutchman was one among thousands of people trying to trace family and friends after a disaster which claimed tens of thousands of lives.

Unreliable communications only added to the difficulty of getting news.

But a posting by a stranger on the BBC News website led Mr Delissen to his relatives, who had all survived.

Mr Delissen, from Nieuwegein, knew the three were holidaying in Thailand on their way to start a new life in New Zealand, but he did not know where.

He turned detective, working out what resort they were staying at by examining pictures saved in his computer's memory cache, but was unable to get through by phone.

Then he spotted a message on the BBC News website from a Swedish man who had contacted his daughter on the same island, Koh Racha Yai, about 30 miles south of Phuket.

Having tracked down the man's phone number in Stockholm, Mr Delissen called him.

“ Thank you Voi-Ping. Your message on this site got me in contact with your daughter on Koh Racha Yai. My brother Theo and his wife and daughter seem to be ok, with everybody else on the island. Thank you BBC, thank you internet ”

Rob Delissen, the Netherlands

2004 Indian Ocean earthquake

From Wikipedia, the free encyclopedia.

This article or section is about Information may change rapidly

For related articles, including [charities accepting donations](#), see [List of charities accepting donations](#).

The **2004 Indian Ocean earthquake** was an undersea [earthquake](#) [December 26, 2004](#). The earthquake generated [tsunamis](#) that with a [magnitude](#) of 9.0, it was the largest earthquake since the 9.2 magnitude for fourth largest since [1900](#).

The earthquake originated in the [Indian Ocean](#) just north of [Simeulue Island](#), [Indonesia](#). The resulting tsunamis devastated the shores of [Indonesia](#) with waves of up to [15 m](#) (50 feet) high, even reaching the east coast of [Africa](#).

At least 150,000 people are known to have died as a result of the earthquake, but the toll may never be known due to bodies swept out to sea, but it is estimated that the toll may be much higher. Agencies warn of the possibility of more deaths to come as a result of [starvation](#) seems now to have been averted [\[1\]](#). The plight of the survivors is a widespread [humanitarian response](#).

HOW GM GOODWRENCH REMOTE VEHICLE DIAGNOSTICS WORKS

In Vehicle Hardware

- GPS Antenna:** Receives time signals from Global Positioning System Satellites
- OnStar Modules:**
 - 3-watt cellular communication device between OnStar and the vehicle
 - Brains of the system — calculates vehicle location, dials the phone, interfaces with vehicle's electronics
- 3 Button Assembly:** Customer pushes one button to connect with OnStar advisor or makes phone calls
- Cell Antenna:** Externally mounted on vehicle for better reception
- Microphone:** Allows driver to speak to OnStar advisor hands-free

- 5 The OnStar Advisor offers one of these actions:
 - No action necessary
 - Service can wait until next regular maintenance check
 - Should get service at GM dealer within 7 days — the advisor can make appointment
 - Get service at GM dealer as soon as possible — the advisor can make appointment
 - Turn off the vehicle immediately and wait for dispatched roadside assistance

OnStar advisor

- Vehicle Monitoring and Assistance
- Commercial Service
- GPS, On-board Sensors and Comms.
- Remote Diagnostics
- Emergency and Accident Aid

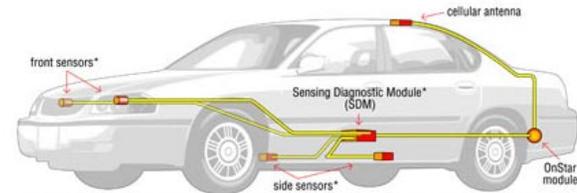

Figure 1: The GM advanced automatic crash notification (AACN) system uses front and side sensors as well as the sensing capabilities of the Sensing and Diagnostic Module (SDM) itself. The accelerometer located within the SDM measures the crash severity.

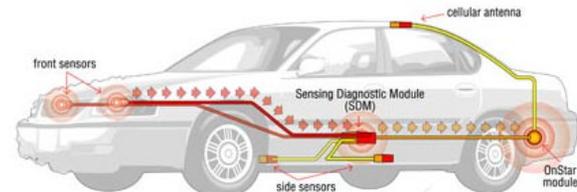

Figure 2: In the event of a moderate to severe frontal or side-impact crash, data is transmitted from the affected sensors to the SDM. The SDM sensor also can identify a rear impact of sufficient severity. Regardless of whether the air bags deploy, the SDM transmits crash information to the vehicle's OnStar module.

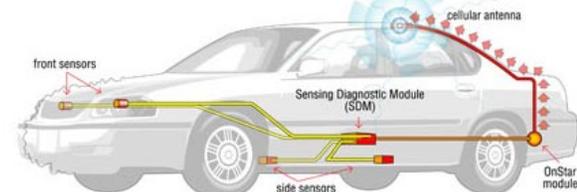

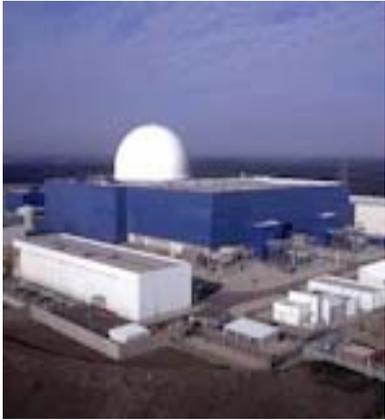

Figure 3: Within seconds of a moderate to severe crash, the OnStar module will send a message to the OnStar Call Center (OCC) through a cellular connection, informing the advisor that a crash has occurred. A voice connection between the advisor and the vehicle occupants is established. The advisor then can conference in 911 dispatch or a public safety answering point (PSAP), which determines if emergency services are necessary. If there is no response from the occupants, the advisor can provide the emergency dispatcher with the crash information from the SDM that reveals the severity of the crash. The dispatcher can identify what emergency services may be appropriate. Using the Global Positioning System (GPS) satellite, OnStar advisors are able to tell emergency workers the location of the vehicle.

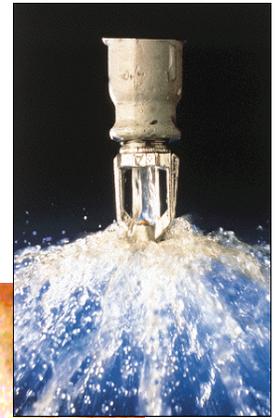

*Number and location of sensors and SDM may vary depending on vehicle model.

FireGrid Technologies

**Tens of Thousands of
Sensors & Monitors**

**Emergency
Responders**

**Knowledge Systems,
Planning & Control**

**Super-real-time
Simulation**

Computational Grid

**Maps,
Models,
Scenarios**

FireGrid Overview

- **Mission statement:**

- » *To establish a cross-disciplinary collaborative community to pursue fundamental research for developing real time emergency response systems using the Grid...*
- » **Initial domain is fire emergencies.**

- **Challenges:**

- » **Sensing:** *instantaneous and continuous relay of data from emergency location to response system via the Grid.*
- » **Modelling:** *model the evolution of fire and impact on building, and relate this to intervention alternatives and evacuation strategies.*
- » **Forecast:** *all simulations, analyses and communications done in 'super real-time'.*
- » **Response:** *effective co-ordination of response with intelligent decision-support system.*
- » **Feedback:** *continuously update simulations, predictions and response using latest data from sensors and responders.*

- **Status:**

- » **DTI/University of Edinburgh/Industry-funded project, total value: £2.23M, start date: 1st March 2006.**

e-Response Vision

*The creation and use of **task-centric virtual organisations** involving people, government and non-governmental organisations, automated systems, grid and web services working alongside intelligent robotic, vehicle, building and environmental systems **to respond to very dynamic events** on scales from local to global.*

e-Response Vision

- ***Multi-level emergency response and aid systems***
- ***Personal, vehicle, home, organisation, district, regional, national, international***
- ***Backbone for progressively more comprehensive aid and emergency response***
- ***Also used for aid-orientated commercial services***
- ***Robust, secure, resilient, distributed system of systems***
- ***Advanced knowledge and collaboration technologies***
- ***Low cost, pervasive sensors, computing and comms.***
- ***Changes in building codes, regulations and practices***

Relevant Technologies

- **Sensors and Information Gathering**
 - *sensor facilities, large-scale sensor grids*
 - *human and photographic intelligence gathering*
 - *information and knowledge validation and error reduction*
 - *semantic web and meta-knowledge*
 - *simulation and prediction*
 - *data interpretation*
 - *identification of "need"*

Galileo

<http://www.esa.int/navigation/galileo/>

http://europa.eu.int/comm/dgs/energy_transport/galileo

Satellite radionavigation is a kind of space compass which allows people to determine their location very accurately. In short, satellite positioning equipment will become as essential as watches are today. Five years from now, every mobile phone will be able to receive signals emitted by satellites and will make it possible to pinpoint the location of people, vehicles, ships, planes, goods and animals at any time, anywhere in the world. This technology will considerably improve guidance systems, accident prevention, the efficiency of civil protection, such as emergency or distress calls, and environmental protection.

Locate

Reliable and accurate positioning services for hikers, sailors and motorists

rescue

Guidance for firefighters, ambulance workers and the police services, who will benefit from being able to intervene more rapidly

Safer transport: fewer accidents, fewer road accident victims

manage

Contribution to environmental protection: it will make it possible to locate those who cause pollution, and to monitor the atmosphere and the movement of wild animals in order to preserve their habitats

More efficiency in rescue operations

Considerable improvement in air traffic safety

study

Environmental research, surveillance of volcanoes, study of earthquakes

Better public transport management

Assistance to farmers in the management of their production

assist

Easier and more reliable prospecting for new natural resources

guide

Help for the blind to find their way

Provision of an extremely accurate time clock, for financial transactions

GALILEO will offer everybody everywhere satellite positioning services with guaranteed reliability. Individuals, companies and administrations will all be able to benefit, whether on the road, railways, in the sky or at sea: hikers will be able to find their way, tourists will be able to find the museum or restaurant they are looking for, and taxi drivers will arrive at the right destination. This new global public service has many professional applications.

UK SITREP 003 - 10 JAN 05
 administrator, 01/10/2005 - 09:37 PM

D/PJHQ/JFHQ/3038

11 Jan 05

CSF 536 CCC

UK MILITARY SUPPORT TO TSUNAMI DISASTER RELIEF OPERATIONS (OP GARRON)
CCC SITREP 003 AS AT 110700GJAN05

Period covered by this report: 091700GJAN05 - 110700GJAN05

1. This report is delayed in an attempt to align its publication with the reception by this callsign of UK sitreps from across the region. UK overall assessment is that the emphasis for co-ordination has now shifted from the military to civilian agencies. The requirement for niche military capability remains, of course, especially in INDONESIA.

- a. SRI LANKA. A total of 388 personnel remain deployed to SRI LANKA. TU 317 (HMS CHATHAM) continues to work in the vicinity of BATTICOLOA although there is a growing recognition that current tasks have only a few days to run. With CANADA deploying teams to the south and INDIA to the north of the 'UK' AO, it is unlikely that UK will find much further gainful employment in the immediate area. Recon is therefore being conducted into the VAKARAI area. Most significantly, it seems that UK entry and operations in LTTE 'areas' is closer to being agreed.
- b. MALDIVES. A UN sponsored concept of operations has been approved by the Government of the MALDIVES. For the UK this includes an element of the Fleet Support Unit (FSU), deployed from TU 317, which will deploy today (11 Jan). Once established, small teams will deploy out to atolls for up to 4 days at a time, conducting essential engineer repair and regeneration tasks. A small C2 node is established in MALE.
- c. INDONESIA.
 - i. The pace and workload of OLRT operations in IND has reached a plateau. Concurrently, UNOCHA has achieved full operating capability (FOC), with the Humanitarian Information Center (HIC), which co-ordinates information flow from various sources, now providing essential focus. It is expected that this capability will substantially improve co-ordination and prioritization and thus its establishment should be recognised as significant progress towards military mission completion.
 - ii. The new UN Humanitarian Co-ordinator, JOEL BOUTOUE, agreed the requirement for UNOCHA to be represented in MEDAN (with HQ CJTF-829). UNOCHA is re-appraising its operational plan for SUMATRA following BOUTOUE's arrival. Government of INDONESIA (GoI) co-ordination of effort now falls to the Minister for People's Welfare, ALWI SHAHIB who is located at PONDOPO (the Vice Governor's residence and operations centre for the GoI's relief programme).
 - iii. Helicopter tasking is becoming more co-ordinated at BANDA ACEH. It is intended to establish a civil/military operations centre to prioritise taskings and submit them to the JLC. The JLC will have embedded AUSAid and USAid alongside military LOs. Requests will be endorsed there before submission to the TNI.
 - iv. Officer Commanding 7 Flight Army Air Corps will arrive in BANDA ACEH today (11 Jan) to begin RSOI of the flight (2 x UH-212).
- d. THAILAND. NSTR.

2. Summary. UK assesses that the emphasis is already turning towards longer-term reconstruction. Planning focuses upon defining those conditions that will dictate the exfil of UK military force. This will not be a 'hand-over' to civilian agencies as they are all actively pursuing full operating capability already. UK Chief of Joint Force Operations (and Comd JTF Op GARRON) is currently in IND visiting HQ CJTF-829 and GEN DARMONO before returning to the UK for a short period of close consultation with strategic agencies. Until his return UK operations will continue at the current tempo but are unlikely to increase in capability or scope.

Mont Blanc Tunnel Fire

TIME (min) Events Consequences

0 **Fire detected**

*Emergency assessment too slow!
Lack of co-ordination between 2 sides.
Too many vehicles enter tunnel.*

10 **1st Decision** ⇒

Traffic stopped

15 **1st Response** ⇒

Fans turned on in wrong direction!

Enhancement of smoke and fire

20 **French Fire Br.** ⇒

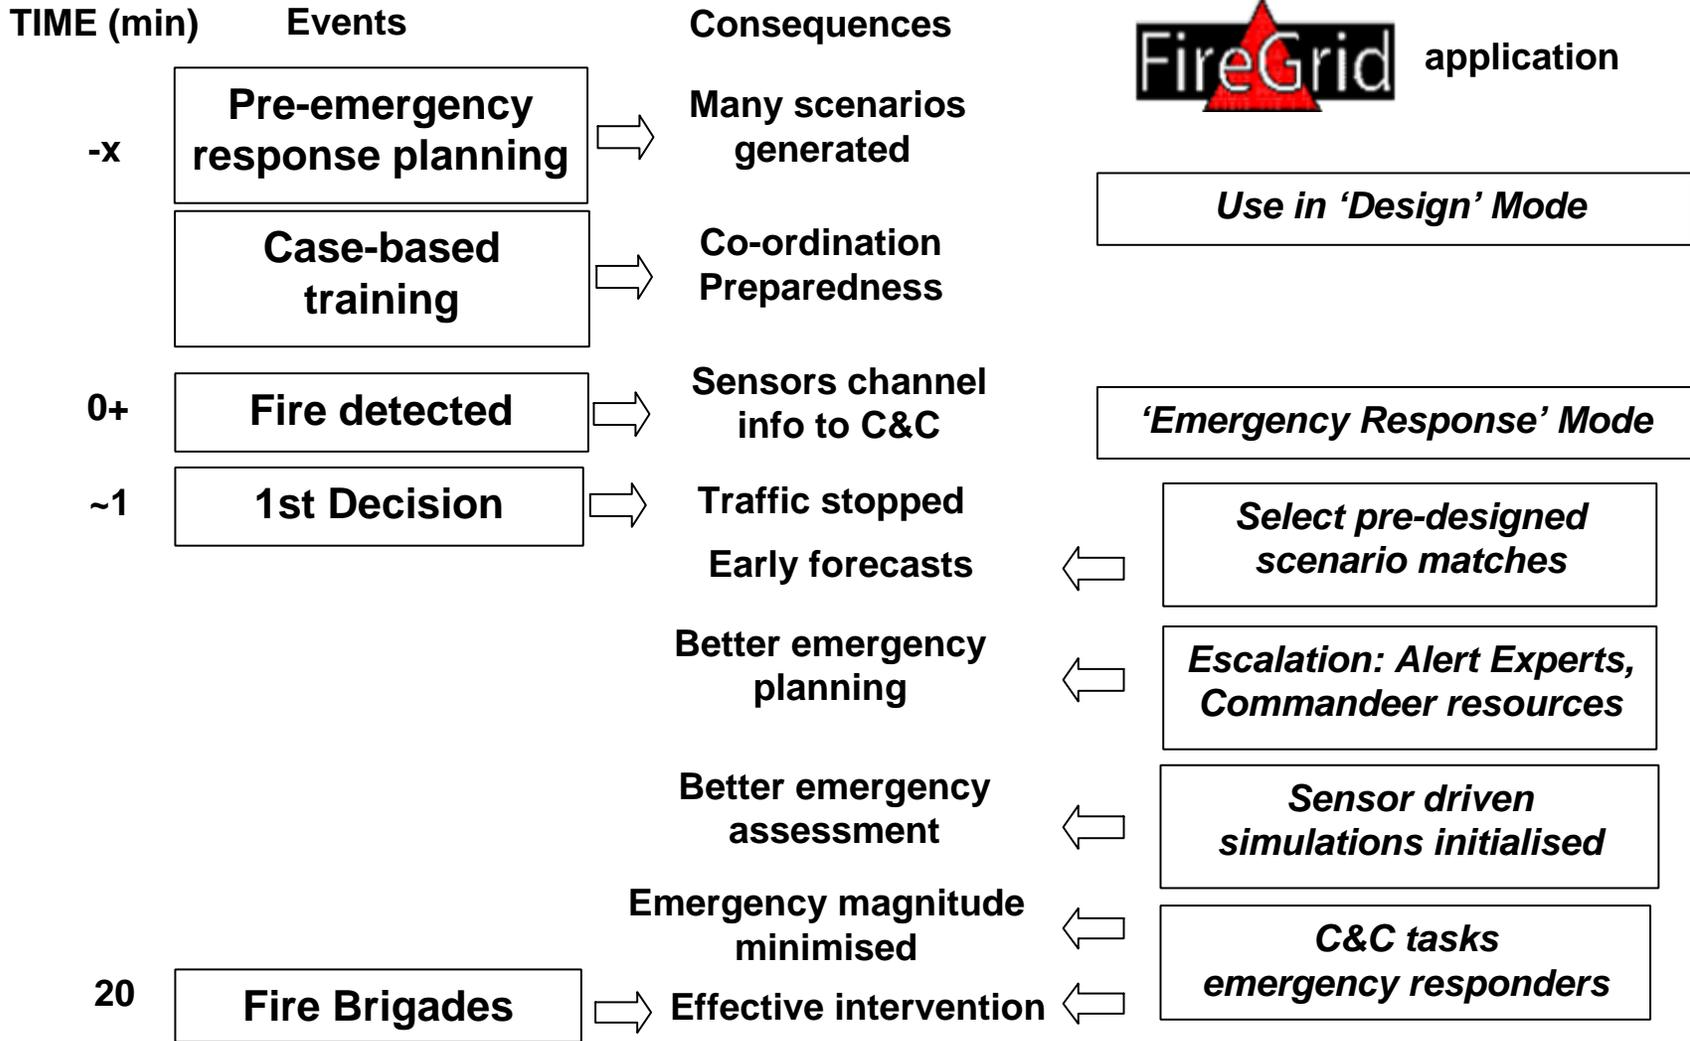

Intervention made difficult by poor initial response

25 **Italian Fire Br.** ⇒

39 dead!

E-RESPONSE

<http://e-response.org>
<http://www.aktors.org/coacting/>

— a response must be coordinated—and quick!

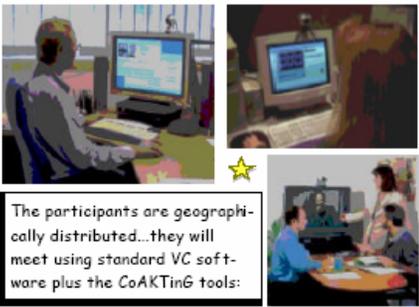

Day One: The e-Response team meets and together with domain experts formulates a response plan.

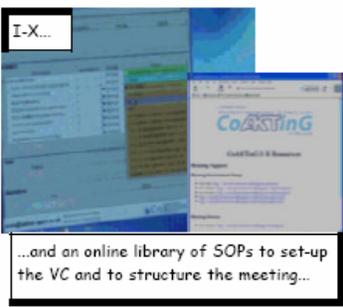

The implementation of the plan is overseen using the I-X tools.

Day Two 7.32am
 The group meets again to review its response.

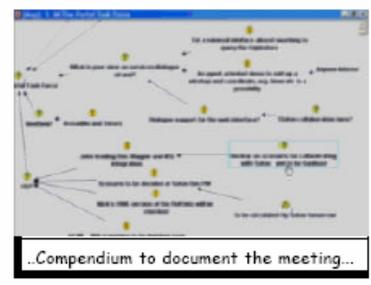

The participants are geographically distributed...they will meet using standard VC software plus the CoAKTiNG tools:

...and an online library of SOPs to set-up the VC and to structure the meeting...

CONTINUED...

...Compendium to document the meeting...

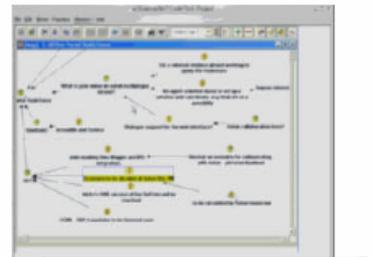

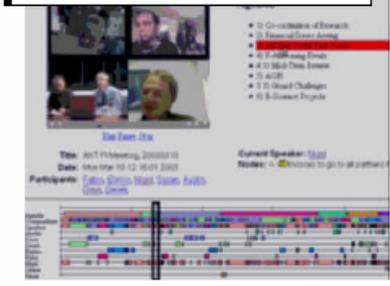

...and BuddySpace for messaging...

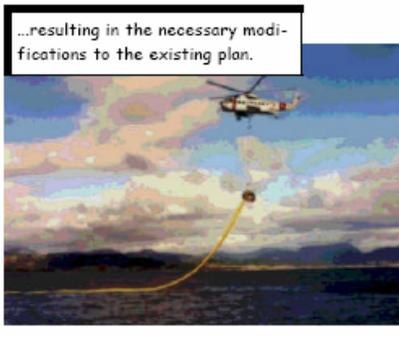

...including communication with a member of the team who is now on location.

Using the in-the-field reports and the latest weather and tide information (provided by Web Services), each decision in the initial plan is re-assessed...

The Replay tool provides instant access to relevant sections of the first meeting...

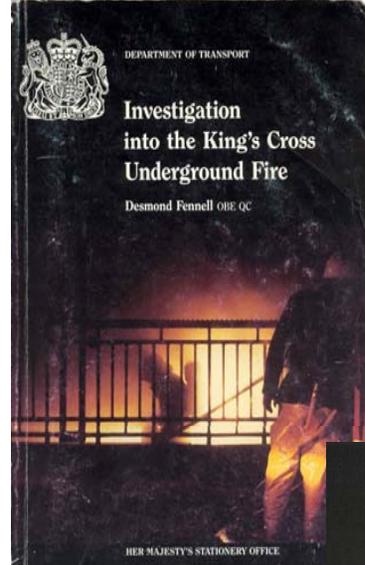

...and allows the underlying rationale to be reappraised in the light of the new information...

...resulting in the necessary modifications to the existing plan.

CREDITS:
 CoAKTiNG is funded by the UK e-Science Programme.
 It comprises groups from The Universities of Edinburgh (AIAI) and Southampton (IAM) and the OU (KMi).
